

# THE ADVANTAGES OF RECONDITIONED PARTS

Reconditioned parts are fully cleaned, serviced and upgraded to optimum working order before being put back on the market.

They are tested and verified to function properly and are free of defects.

## COST

Purchasing reconditioned equipment is significantly less expensive than buying brand new equipment.

It's an excellent way for manufacturers to replace old or broken down parts without breaking the bank.

2

## COMPATIBILITY

Not only are reconditioned parts less expensive than new ones, but purchasing an exact replacement also prevents compatibility issues.

In some situations, the best option is to stick to legacy systems that have been thoroughly tested.

3

## RELIABILITY

Just because something has been refurbished, it doesn't mean it won't last as long as a brand new part.

We are so confident in the reliability of our reconditioned parts that we offer a 12-month guarantee on each and every one of them.
